

INDEX ChipMaster

The solution for optimum chipping –
more process reliability and higher productivity

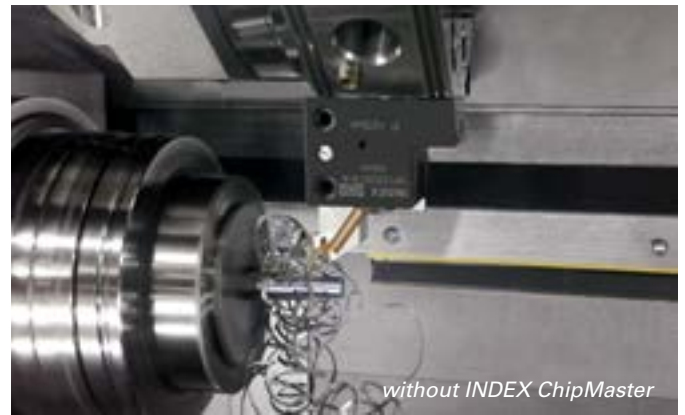

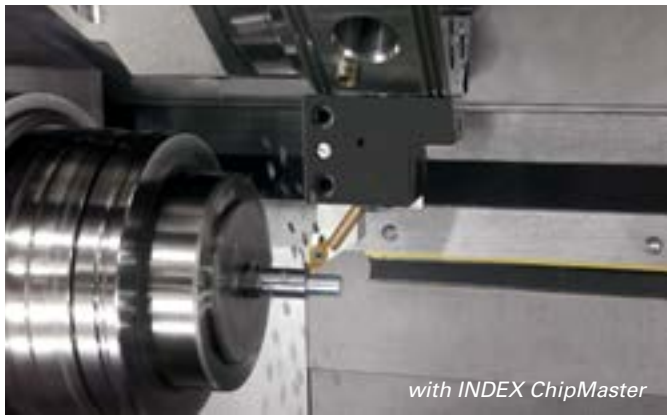

Upgrade
cost-efficiently!

With the new cycle integrated chipping software ChipMaster, INDEX ensures controlled chipping during the machining (longitudinal turning, face turning, contour turning and cutting) of all materials used.

The solution:

The new cycle integrated chipping software INDEX ChipMaster sets new standards for your production. It optimizes the chipping with variable feed. Regardless of material (for example aluminium, non-ferrous metals, stainless steels, titanium) of your workpiece, speed and way of processing on the machine - INDEX ChipMaster is the solution for economically optimized turning operations. The newly developed software can be used and upgraded without any problems on your INDEX turning machine with latest Siemens control. Ask your technical consultant.

Your benefits

- Less waste
- Less unplanned interventions by machine operator or maintenance staff
- Increase of tool life
- Higher productivity and process reliability
- Customer-specific parameterizable and adaptable
- Usable on INDEX single and multi spindle machines, upgradable (depending on control)
- Cost-effective solution
